

## **Protect the Great Lakes—Pass a Strong Great Lakes Compact**

Dear Legislator,

The Great Lakes are a unique resource, containing 20% of the earth’s fresh surface water and supporting a \$15 billion economy. Unfortunately, the increasing demands of industry, a growing population, and water-hungry southwestern states and countries like China are making them more vulnerable. Permanent changes in water levels will threaten the ability of the Great Lakes to support us in the future.

This session, Wisconsin has an opportunity to pass a strong Great Lakes Compact that will be a good deal for Wisconsin. Pressure is building to allow precedent-setting water diversions that could result in our Great Lakes’ water being shipped across the globe if we don’t act now.

**I ask you to support a strong Great Lakes Compact that strengthens the ban on diversions, clarifies the bottled water loophole, requires diverted water to be returned to the lakes, promotes water conservation, and maximizes public input.**
